

Alaska Pandemic Vulnerability Index

Description: Pandemic Vulnerability refers to the susceptibility of a community to the negative effects of disease outbreaks, like COVID-19. The pandemic vulnerability index is developed for Alaska by boroughs and census areas using various socioeconomic, demographic, housing & transportation, minority and language, and health care factors. Combined, these societal factors are ranked from 0 to 1, where 0 refers to low vulnerability, and 1 refers to high vulnerability.

Data Source: American Community Survey (ACS) 5-year Estimates (2014-2019), Behavioral Risk Factor Surveillance System (BRFSS), Homeland Infrastructure Foundation-Level Data (HIFLD)
